**DETAILED ACTION**

***Claim Objections***

Claims 4-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not be depended from another multiple claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claims 4 and 9 are objected to because of the following informalities: claims 4 and 9 depend from any of the present claims rather than only preceding claims. Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

**Claims 1-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Leppard et al. US 5,942,290.**

Regarding claim 1, Leppard discloses a process for preparation of acylphosphine oxide compounds comprising melting

and then slowly cooling the melt and seeding crystals (see paragraph bridging columns 2-3).

Leppard fails to disclose external stress, shearing, and/or internal agitation.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply external stress, shearing, and/or internal agitation to the process of Leppard because Leppard discloses the compounds mixed in the melted state (column 2, lines 63-64), which would motivate an ordinarily skilled artisan to apply shearing or agitation to accomplish the disclosed mixing.

Regarding claims 2-3, it would have been obvious to one of ordinary skill to select a diameter and an optimum percentage of acylphosphine oxide including at least 85% arrived at through routine experimentation.

**Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 31 39 984 A in view of Heinz G. G O Becker et al.**

Regarding claims 1-3, according to the evidence of record, specifically the foreign language references and search report, the claimed process for preparation of acylphosphine would have been obvious to one of ordinary skill in the art at the time the invention was made because it would have been obvious to one of

ordinary skill to combine the teachings of DE '984 and Heinz to arrive at the claimed process (see the filed references and the German search report). Applicant is invited, but not required, to submit an English translation of the references and/or search report above.
